# What to consider when installing AV

## WHY

Why is this AV being installed? What is its purpose within the exhibition?

## WHAT

What is the content? How will it best be displayed? How long does it run for?

## WHERE

Where will it be installed? Is the building heritage listed? What are the light levels like? Is there access to power or network?

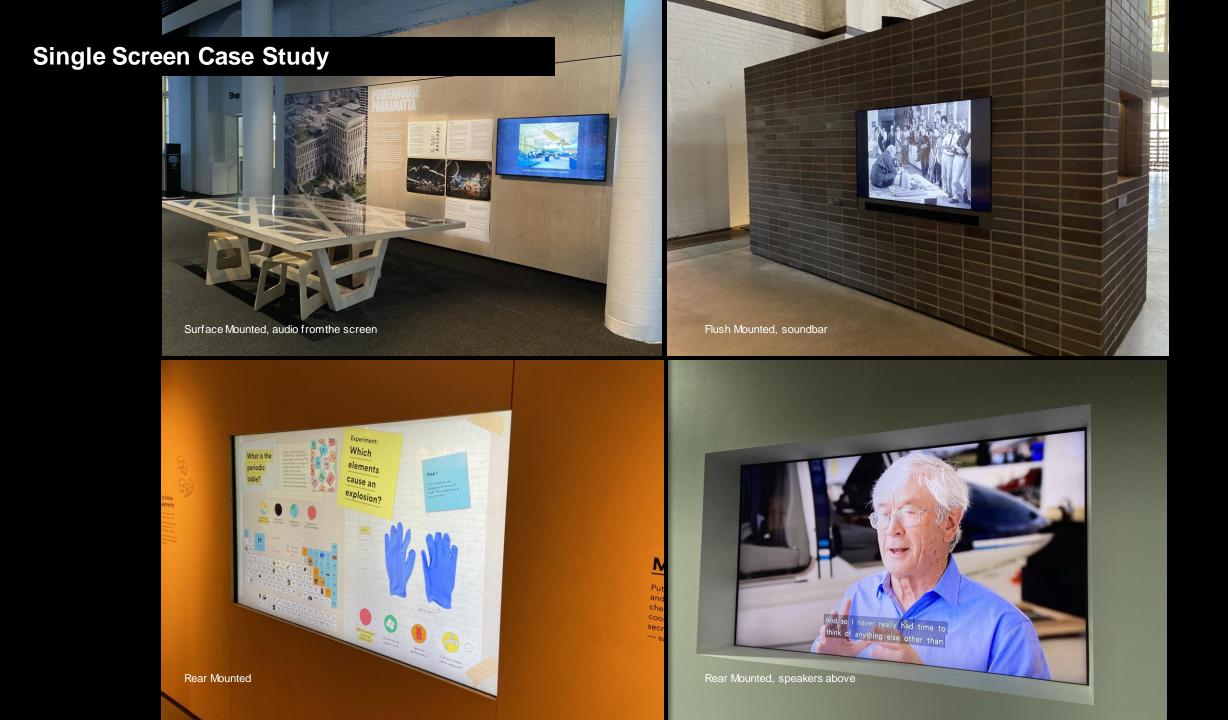

### WHO

Who is your intended audience? Do power buttons etc need to be covered?

## HOW

How will this be installed? What equipment do you need for this?

# AV on a Budget

- Media Player Options
- Free Resources
- Simple ideas for cost effective Interactives

### **Media Player Options**

### <u>USB</u> – From \$10

Load content and play. For TVs – works best with images. Manual start up required each day.

### Raspberry Pi – From \$70

Mini Computer. Basic programming skills required. Low daily maintenance. Automatic start-up.

### <u>Lupa Player</u> – \$300

Simple looping media player. Extremely easy to use – no technical skills required.

#### Brightsign – From \$600

Complex Media Player. Programming skills required. Extremely Versatile and highly reliable.

Brightsign

### **Free Programs for Raspberry Pi's**

### <u>Screenly</u>

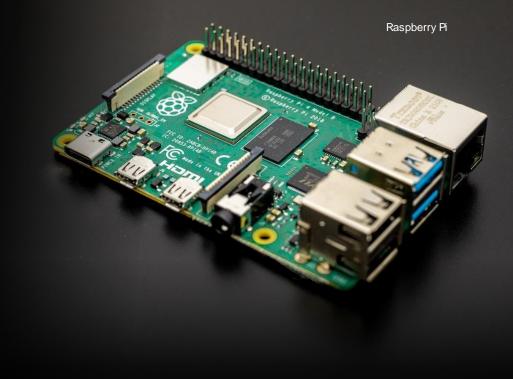

Simple content playback system – commonly used for wayfinding displays. Internet connection required. Content loaded over the network. Simple programming skills.

www.screenly.io

### Pi Presents

Specifically designed with museums in mind. Programming skills required. Flexible system to allow for simple loops or more complex interactives.

- Playback

# Hints & Tips - Projectors

### **Running Costs**

Lamps need to be replaced and filters cleaned regularly.

### Lumens

The higher the number the brighter the projector. We recommend upwards of 3000lms.

## **Shadow Casting**

People casting a shadow on the screen when they get too close.

## Size of Image

Different lenses. Distant to screen. Use a projection distance calculator tool to help.

# Colours

Projectors do not project Black.

### Front vs Rear Project

Different screen types, shadows.

## **Heat Emission**

Need space around them for air flow.

### Install Direction

Does it work when installed in portrait mode?

### **Mounting Brackets**

Weight of projector. Tilt adjustment.

### Resolution Full HD vs 4K.

# Hints & Tips - Screens

### **Screen Burn-In**

If an image is static over a long period of time it may burn into the screen and be visible when displaying other images.

### **Viewing Angle**

If installing flat you will want a viewing angle that is as close to 180 degrees as possible.

### **Room Brightness**

If your room is bright – a screen may work better than a projector.

## **Multiple Screens**

If screens are displaying the same content next to each other it is important to have the colour balance the same.

### Audio

In-built speakers in Screens 32" and over. Computer Monitors do not commonly have speakers.

### Mounting Brackets

Flat backed screens vs curved backed screens

### **Heat Emission**

Low heat emission but still require air flow. Important to check this if installing in a showcase.

# **Hints & Tips - Mounting**

### **Install Height**

We have our standard set at 1500 to the centre of the screen.

### **Screen Mounting Brackets**

Cheapest option is the split batten. You can get different types for surface, flush or rear mounting.

### Portable

There are some great TV stands on wheels that are very good for events and temporary displays.

### **Projector Brackets**

Be sure to check the weight of the projector. Also good to have some adjustment in the bracket too (for tilt)

## **Cable Management**

Conduit, spiral wrap, cable ties

## **Mounting Brackets**

Surface Mounted

Flush Mounted

Portable

Projector Mount

# **Hints & Tips - Playback**

**Timings** 7-10 seconds per image

Video Lengths People only watch a video for an average of 2mins

Motion Trigger Sensor Control your content playback from a motion sensor.

**Resolution** Standard is 16:9. 1920x1080 which is Full HD.

**Power Timers** Set a timer to power on your device at specific times.

**File Types** Most common are mp4 for video and mp3 for audio.
